

Colour

GRADIENT COLOURS

In line with our vibrant look and feel, the colours represent our presence as a University of the Tropics across our tri-city location, both in Australia and Singapore. They reflect the colours of our natural environment. Our identity features gradient colours – Gradient Blue, Gradient Orange, Gradient Green and Gradient Red. The colours are a smooth gradient which transition from the 'Vibrant' to 'Dark' colours specified, and can be used with a diagonal gradient. These colours feature prominently in our communications, as part of the graphic language.

FLAT COLOURS

For small areas of colour, headings, subheadings and pull-out text, flat colours can be used. For consistency, only the four specified colours (Vibrant, Bright, Mid and Dark) from each gradient should be used.

SUPPORTING COLOUR

The supporting colour is available to help arrange and disseminate information. This colour may be used for applications such as internal pages of a course brochure or prospectus, for example to hold text or tables.

WHITE SPACE

The use of white space is an important ingredient to maintain integrity and professionalism.

BODYCOPY

Publications: 80% black should be predominantly used for all body copy. As an exception, all copy in press advertising should be 100% black.

TRANSPARENCY

When used in conjunction with an image, we use transparent gradients or flat colour to allow the image to interact with colour. Transparent versions of the colour palette have been created to add modernity to layout compositions. The opacity of these colours is 80%.

PRIMARY COLOUR PALETTE

Gradient Blue

TRANSPARENCIES

Achieving the transparent colour
The strength of opacity should be 90%, with the blend mode set to normal to achieve the best legibility and contrast.

The dialog box above indicates the opacity level to be used.

GRADIENT

Gradient direction
The gradient should be directional - wherever possible it should be on the diagonal axis.

* CMYK can be used for all print applications. Pantone chips should be used when the printing method requires, for example, screen printing or embroidery.
